

Wedge gaskets, notched or cut

Notched, cut and costs saved

SEMPERIT sealing wedges for internal use on panes in aluminium windows are designed for minimum installation times and maximum service life. The wedge gaskets are available as notched and cut variants. These reliable solutions can be inserted around every commonly used corner angle. Easy to roll in, the wedge gasket can be removed and re-inserted with ease, for example, when panes are replaced. This helps you reduce working times, material costs and the risk of damage.

We can offer you notched or cut wedge gaskets in all of the customary geometries and material qualities. The convincing features of our EPDM gaskets are outstanding resilience and their resistance to ozone, UV and weathering – top quality that gives you the competitive advantage.

SEMPERIT EPDM gaskets are high-quality products: durable, maintenance-free and sustainable.

SEMPERIT wedge gaskets, notched or cut

Your advantages at a glance

- Your advantages at a glance
- Solutions for conventional geometries and in all compounds
- Easy, time-saving, cost-effective installation
- Simple removal for pane replacements
- High quality, durable and maintenance-free
- Excellent mechanical properties
- First-rate compression set, minimal residual deformation
- UV-resistant, ozone-resistant, weatherproof
- No contact discolouration on coatings and PVC
- Elastic and impermeable at temperature ranges from -35 °C to +100 °C
- All SEMPERIT gasket elements conform to DIN 7863 and DIN EN 12365
